a Nested comparison within areas (primary, H2)
R = names increment / baseline gain
baseline gain (denominator of R)
names increment
Position (M0)
+ terrain, HAND, rivers, land cover, settlement layout (M1)
+ regional composition of names: which names occur in the area (M1c)
+ the names of each cell's nearest settlements (M3n)
placebo (M3np): the same names reassigned among the area's settlements
b Terrain ladder (H3)
T0 no elev. or HAND
T1 1.25 km mean
T2 250 m
T3 30 m stats
T4 (M1) T3 + HAND
c Three classifications of names
lexicon: water, wetland, riverine, crossing, lowland, highland elements; 47 language blocks
character model: learned on training areas only
language model (secondary): name elements; tested on floods after its training cut-off
d Held out
• location groups (primary)
• countries
• floods from 2024
• floods after the model's cut-off
