Names within areas (primary, H2)
Same, Norwegian names read correctly
Lexicon only (N-lex)
Character model only (N-learn)
Placebo: names reassigned
Position only, within areas (H1)
Countries held out
Time held out (floods from 2024) *
Language model, floods after its cut-off (H4)
Lexicon and character model, same floods
Language model incl. its composition (secondary)
Total incl. regional composition (secondary)
Flexible model refitted with names (secondary)
0.15
0.14
Independent labels (GFM): rescored
Independent labels (GFM): refitted
R undefined: terrain did not improve on position
Flood traces counted as not flooded
Flooded share over land only
Flood events held out whole
Without the Americas and Oceania
Every AOI weighted equally
Strict reading (water bodies, wetland, riverine)
Language-model reading, primary split
Gazetteer cleaned of city sections and duplicates
Without AOIs lacking a hydrography layer
Without AOIs lacking a flood type
13 assignments of places to folds (range)
Names reassigned 200 times, 95% range (grey); real names (dot)
−0.08 −0.06 −0.04 −0.02 0.00 0.02 0.04 0.06 0.08
R (improvement from names / improvement from terrain)
