10
15
20
difference in share of cells with ground ≤ 2 m above drainage (pct. points; filled: at the settlement, open: all cells)
(b)
HAND ≤ 2 m (no flood labels)
flooded (EMS)
flooded, net of terrain model
water-side − other names (pct. points)

4
2
0
≤250 m
250–500 m
0.5–1 km
>1 km
distance to the nearest settlement
(c)
EMS, all analysed AOIs
EMS, all cells of the GFM AOIs
EMS, GFM-assessable cells
GFM, same cells
EMS, cells assessable in V1
GFM V1 (seasonal water assessable)
0.25
0.5
1
2
odds ratio of flooding within 500 m of settlements with water-side names, given the terrain model
(d)
gain in the names increment, ΔBS (×10⁻⁴)
