a Nested comparison within areas (primary, H2)
Position (M0)
+ terrain, HAND, rivers, land cover, settlement layout (M1)
+ regional composition of names: which names occur in the area (M1c)
+ the names of each cell's nearest settlements (M3n)
terrain increment (the yardstick)
names increment
R = names / terrain increment
placebo (M3np): the same names reassigned among the area's settlements
b Terrain ladder (H3)
T0 no elev. or HAND
T1 1 km
T2 250 m
T3 30 m stats
T4 = M1 + HAND
c Three readings of names
lexicon (N-lex): water, wetland, riverine, crossing, lowland, highland elements; 47 language blocks
character model (N-learn): learned on training areas only
language model (N-read): name elements; tested on floods after its training cut-off
d Held out
• location groups (primary)
• countries
• floods from 2024
• floods after the LM cut-off
