(a) The protocol's intervals (fitted models held fixed)
Names within areas (primary, H2)
Same, corrected code (Norwegian names read)
Lexicon only (N-lex)
Character model only (N-learn)
Placebo: names reassigned
Position only, within areas (H1)
Position only, flexible models (H1, descriptive)
Total incl. regional composition (secondary)
Flexible model refitted with names (secondary)
Countries held out
Time held out (floods from 2024)
Language model, floods after its cut-off (H4) *
Lexicon and character model, same floods
Same, flexible models refitted (secondary)
Language model incl. its composition (secondary)
Activations kept whole (exploratory), frozen code
Same, corrected code
R = 0.15, upper limit 0.36
upper limit 0.15
upper limit 0.14
R undefined: the baseline did not improve on position
R = 0.17, upper limit 0.33
(b) Post hoc intervals, in the order defined
Location groups, second stage refitted (amendment 8)
Activations × countries, refitted (amendment 11)
Test on the ratio (a): location groups, models fixed
(b): location groups, second stage refitted
(c): activations within countries, refitted
(d): (c) with fold-assignment variance
Location groups × activations, refitted (pigeonhole)
−0.05
0.00
0.05
R (improvement from names / baseline gain)
