am. 11: given the baseline model; every assessable cell; AOIs not mapped from Sentinel-1
am. 11: given the baseline model; every assessable cell
am. 3, add. 2: given the baseline model; GFM pixels all valid
am. 3, add. 2: GFM pixels all valid; without the baseline model
am. 3, add. 2: given the baseline model; GFM pixels 90 % valid
am. 3, add. 2: GFM pixels 90 % valid; without the baseline model
am. 7: given the baseline model; given land cover
am. 3: given the baseline model
am. 3: given the baseline model; baseline trained on GFM
am. 6: given the baseline model; first GFM version
am. 3: without the baseline model
am. 6: first GFM version; without the baseline model
am. 3: given the baseline model; AOIs not mapped from Sentinel-1
am. 3: AOIs not mapped from Sentinel-1; without the baseline model
am. 11: given the baseline model; AOIs not mapped from Sentinel-1
am. 11: given the baseline model; cells GFM can assess
am. 3: given the baseline model; baseline trained on GFM
am. 3, add. 2: GFM pixels 90 % valid; without the baseline model
am. 3, add. 2: given the baseline model; GFM pixels 90 % valid
am. 3: without the baseline model
am. 3: given the baseline model
am. 6: first GFM version; without the baseline model
am. 3: given the baseline model; AOIs not mapped from Sentinel-1
am. 6: given the baseline model; first GFM version
am. 3: AOIs not mapped from Sentinel-1; without the baseline model
am. 3, add. 2: GFM pixels all valid; without the baseline model
am. 3, add. 2: given the baseline model; GFM pixels all valid
am. 8: given the baseline model; without Pakistan
am. 2: without the baseline model
am. 8: given the baseline model; cleaned lexicon
am. 9: given the baseline model; one permanent-water mask
am. 2: cleaned lexicon; without the baseline model
am. 2: given the baseline model; cleaned lexicon
am. 9: given the baseline model; bare-earth terrain
am. 7: given the baseline model; given land cover
am. 7: given the baseline model; pairs bootstrap
am. 2: given the baseline model
am. 7: given the baseline model; partly flooded cells removed
am. 8: given the baseline model; given heights above main rivers
am. 8: cells GFM can assess; without the baseline model
am. 8: given the baseline model; without Australia
am. 8: given the baseline model; typed flooding only
am. 7: given the baseline model; share of riverine flooding as outcome
am. 8: given the baseline model; without Pakistan and Bangladesh
am. 8: given the baseline model; without Oceania, Americas
am. 11: given the baseline model; every evaluable cell
am. 8: given the baseline model; every evaluable cell
am. 8: given the baseline model; without AOIs lacking hydrography
GFM labels
EMS labels, cells GFM can assess
EMS labels, all cells
planned (amendment 3)
chosen after both were seen (amendment 11)
every evaluable cell (no cap)
0.25
0.5
1
2
odds ratio of flooding within 500 m of water-related names (95 % interval)
